Subject Rico - START data set and parcel sketches

et al.

Some of Rico parcel-specific information provided by START may be misleading:

1. Property reported as 1 E Soda Street is actually two parcels. According to START, the northern parcel (0.3 acres - address unknown), with a surface concentration of 2300 ppm Pb (single composite sample), is currently owned by Stramel. The southern parcel (0.23 acres), 1 E Soda Street, the Hersey property, has an average surface concentration (two samples) of 9000 ppm.
2. Property(s) reported as 113 and 115 Silver Street apparently have two different owners with the same last name. Future reporting (ie, Deb's data table) should maintain this distinction.
3. Property reported as 12 North Glasgow is actually two parcels. According to START, the southern parcel (approx 5000 sq ft - address unknown), with a surface concentration of 3100 ppm Pb (single composite sample), is currently owned by Foxwell. The northern parcel (approximately 5000 sq ft), 12 N Glasgow, the Lang parcel, has an average surface concentration (three samples) of 890 ppm.

Deb - you may want to consider re-ordering your data table.

Luke - you may want to request that START redo their site sketches.
